TECHNICAL SKILLS

AWS (VPC, EC2, S3, IAM, Auto Scaling, Cloud Watch, SNS, ECR, NAT Gateway, API Gateway, Security Groups, Launch Template, Load Balancer)

Jenkins

Git

GitHub

linux

DevOps

Docker

Kubernetes

Terraform

Maven

Nexus

SonarQube

Linux

Windows

Shell Scripting

Azure

Azure DevOps

GitHub Actions

EDUCATION

Bachelor of technology, Bapatla Engineering College, Bapatla

PROFESSIONAL SUMMARY

- **Dynamic AWS & DevOps Trainer with 8+ years of hands-on experience** in architecting, implementing, and managing cloud and DevOps solutions that enhance operational efficiency, scalability, and reliability across enterprise environments.
- Successfully delivered **Corporate Training Programs** on **Cloud Computing, DevOps, Azure DevOps, AWS, Kubernetes, Docker, GitHub Actions, ArgoCD, and FinOps** for leading enterprise organizations.
- Designed and delivered **customized instructor-led training** aligned with enterprise project requirements, combining theory, demonstrations, and 100% hands-on labs.
- Delivered **Corporate Training programs on Multi-Cloud Technologies (AWS & Microsoft Azure)**, enabling enterprise teams to design, deploy, secure, and operate cloud-native infrastructure through instructor-led sessions, hands-on labs, workshops, and capstone projects.
- Conducted comprehensive training on **AWS and Azure Fundamentals**, including cloud architecture, global infrastructure, IAM, Azure RBAC, compute, storage, networking, and identity management for enterprise and network operations teams.
- Delivered hands-on workshops covering **Cloud Networking and Connectivity-** , including VPC, VNet, Subnets, Route Tables, NAT Gateway, Internet Gateway, VPC Peering, VNet Peering, VPN Gateway, AWS Direct Connect, Azure ExpressRoute, Transit Gateway, and Azure Virtual WAN.
- Trained professionals on **Cloud Security and Governance**, covering Security Groups, Network ACLs, Azure NSGs, Web Application Firewall (WAF), DDoS Protection, PrivateLink, Azure Private Endpoints, AWS KMS, Azure Key Vault, AWS Config, Azure Policy, and Microsoft Defender for Cloud.
- Conducted practical sessions on **Cloud Monitoring, Observability, and Incident Management**, implementing AWS CloudWatch, Azure Monitor, Log Analytics Workspace, Network Watcher, Flow Logs, alerting strategies, and cross-cloud operational dashboards.
- Delivered enterprise-focused training on **Infrastructure as Code (IaC)** using **Terraform**, AWS CloudFormation, and Azure ARM Templates, enabling participants to automate multi-cloud infrastructure provisioning and deployment pipelines.
- Mentored Cloud Engineers and Network Operations teams in designing **Highly Available, Secure, and Scalable Multi-Cloud Architectures**, incorporating networking, security, monitoring, disaster recovery, and hybrid cloud connectivity best practices.
- Designed and facilitated **real-world hands-on labs, scenario-based workshops, and capstone projects** focused on enterprise cloud networking, migration strategies, cloud security, operational excellence, and multi-cloud architecture implementation.
- Delivered advanced sessions on **Cloud Migration Strategies**, including the 6Rs migration framework, AWS Application Migration Service (MGN), Azure Migrate,

workload assessment, cutover planning, rollback strategies, and production migration best practices.

- Guided participants on industry-recognized certification paths including **AWS Certified Cloud Practitioner, AWS Advanced Networking Specialty (ANS-C01), AWS Security Specialty, Microsoft Azure Fundamentals (AZ-900), Azure Networking (AZ-700), and Azure Security Technologies (AZ-500)**, preparing them with practical implementation skills and certification readiness.
- Trained **Cloud Engineers, DevOps Engineers, Software Developers, Infrastructure Engineers, Architects, and Technical Leads** on modern cloud-native technologies.
- Created comprehensive **training roadmaps, lab guides, architecture diagrams, capstone projects, assessments, and real-world implementation scenarios** to accelerate learning.
- Mentored participants in adopting **industry best practices** for CI/CD, Infrastructure as Code, Kubernetes, Cloud Security, Monitoring, and DevOps automation.
- Conducted technical assessments, architecture reviews, mock interviews, and project evaluations to measure learning outcomes and production readiness.
- Delivered both **virtual and classroom-based corporate training** with a strong emphasis on practical implementation and enterprise use cases.
- Worked closely with enterprise stakeholders to customize training content based on organizational cloud adoption and digital transformation initiatives.
- Enabled engineering teams to implement production-ready cloud solutions through architecture workshops and hands-on implementation sessions.
- Specialized in delivering enterprise-level workshops focused on cloud architecture, automation, scalability, security, governance, and operational excellence.
- **Strong Linux administration expertise**, including system configuration, automation of routine tasks, performance optimization, and troubleshooting in production and training environments.
- **Proficient in PowerShell scripting and automation**, with the ability to design and deliver end-to-end automation workflows such as user provisioning, infrastructure setup, log management, and configuration orchestration for Windows and cloud environments.
- **Deep experience with DevOps toolchains**, including Docker, Kubernetes, GitHub Actions, SonarQube, and Maven, enabling seamless CI/CD pipeline implementation, application containerization, quality checks, and automated deployments.
- **Extensive real-world AWS project experience**, having worked on multiple cloud consulting and training assignments involving EC2, S3, IAM, VPC, EKS, CloudFormation, and DevOps services—delivering optimized, cost-effective, and secure cloud architectures.
- **Proven trainer and collaborator**, known for delivering high-quality corporate training programs, simplifying complex DevOps concepts, and empowering teams to adopt automation, best practices, and modern cloud-native technologies effectively.
- **Advanced Linux shell scripting skills**, enabling automation of system maintenance tasks, log rotation, backup processes, permission management, and environment provisioning across diverse server environments.
- **Expert in PowerShell for infrastructure automation**, including writing reusable modules, managing Windows services, automating Azure/AWS tasks, handling system configurations, and integrating scripts with CI/CD pipelines for end-to-end automation.
- **Strong hands-on experience with Jenkins CI/CD pipelines**, including pipeline-as-code (Declarative & Scripted), integration with GitHub, Docker, Maven, SonarQube, and automated deployment workflows to streamline development and release cycles.
- **Successfully trained multiple fresher batches** on DevOps, Cloud Computing, Linux, and Shell Scripting, enabling them to build strong technical foundations.
- **Delivered hands-on, industry-oriented training programs** covering CI/CD, Docker, Kubernetes, Git, Linux, and Cloud fundamentals to make learners job-ready.
- **Conducted workshops and technology awareness sessions** across Tier-1 and Tier-2 colleges, helping students understand modern DevOps and cloud practices.

- **Designed structured training modules** with real-time use cases, labs, and project-based learning to bridge the gap between academic learning and industry requirements.
- **Trained internal teams of organizations** to enhance their DevOps, Infrastructure, and Cloud skill sets, improving overall team productivity and operational efficiency.
- **Delivered specialized training on Shell Scripting**, focusing on automation, system administration, and real-time problem-solving techniques.
- **Conducted corporate training programs on DevOps and Cloud Computing-** , enabling teams to adopt CI/CD, containerization, and cloud-native workflows.
- **Recognized for clear communication, interactive mentoring, and practical sessions**, helping learners confidently understand and implement end-to-end DevOps workflows.
- **Delivered comprehensive AI Fundamentals training** covering AI vs. Machine Learning vs. Deep Learning, supervised and unsupervised learning, LLM fundamentals, Generative AI concepts, tokens, context windows, temperature, capabilities, limitations, and real-world industry use cases.
  Conducted practical Prompt Engineering workshops covering role-based prompting, context engineering, prompt patterns, structured outputs, iterative prompt optimization, and techniques for improving the accuracy and relevance of AI-generated responses.
  Delivered hands-on training on AI Productivity Tools, including **GitHub Copilot and Claude**, enabling participants to leverage AI for code generation, documentation, testing, refactoring, debugging, code analysis, and developer productivity while understanding responsible usage and tool limitations.
  Trained participants in building AI-powered applications using concepts such as **Retrieval-Augmented Generation (RAG), AI chatbots, AI agents, function calling, and API integration**, with practical demonstrations of how LLMs can be integrated into enterprise applications and business workflows.
  Delivered training on Responsible AI and Data Analytics, covering hallucination and bias mitigation, AI output validation, secure AI practices, data privacy, intellectual property, organizational AI policies, along with **Advanced Excel, SQL for Analytics, Power BI dashboards, and effective communication of business insights**.

★ PROJECTS

Wipro Infra support, Bengaluru
Jul 2025 — Sept 2025

Created and configured IAM users, defined custom IAM policies, and attached them to users based on role and access requirements. Monitored key AWS services, including EC2 instances and EKS clusters, to ensure system performance and availability. Regularly reviewed and analyzed the AWS Billing Dashboard to identify cost optimization opportunities and manage resource utilization effectively. Ensured all IAM user permissions were aligned with organizational security policies and compliance standards. Collaborated with cross-functional teams to resolve access-related issues and maintain secure and efficient cloud operations.

Jenkins–SonarQube Integration for Automated Code Quality Analysis, Bengaluru

Installed and configured Jenkins and SonarQube, and integrated both tools to enable automated code quality checks within CI/CD pipelines. Developed Jenkins pipelines to automate end-to-end workflows, including code checkout, dependency installation, linting, and SonarQube analysis with enforced Quality Gates. Created custom SonarQube Quality Profiles tailored to project coding standards and best practices. Generated and exported SonarQube analysis reports in multiple formats (PDF, JSON, XML) for detailed code quality insights. Ensured high code maintainability, adherence to industry coding standards, and early detection of vulnerabilities or code smells.

Web App Deployment Using CI/CD Pipeline – Travel Booking System, Bengaluru

Implemented a CI/CD pipeline using Jenkins and GitHub Actions, integrating SonarQube for automated code quality checks and security scanning with fail conditions on critical issues. Built, tagged, and pushed Docker images for both frontend and backend applications to AWS Elastic Container Registry (ECR) and Docker Hub using parameterized pipelines for flexibility and reusability. Configured Docker Compose with custom networks, volumes, and environment variables to enable reproducible and consistent multi-container deployments. Automated the generation of pipeline reports documenting build results, quality gate statuses, security scan findings, and image deployment details for transparency and auditability. Enhanced the overall software delivery process by ensuring quality, security, and reliability through continuous integration and deployment automation.

3-Tier Architecture Deployment on AWS by (Manual), Bengaluru

Designed and deployed a 3-tier architecture consisting of Presentation (Frontend), Application (Backend), and Database layers on AWS Cloud. Configured VPC, subnets, route tables, and security groups to establish secure and efficient inter-tier communication while maintaining controlled internet accessibility for the frontend. Deployed EC2 instances for hosting frontend and backend services, and provisioned a managed RDS instance for reliable data storage and persistence. Implemented network segmentation and access control policies to ensure secure, high-performance communication between tiers and prevent unauthorized access. Achieved high availability, scalability, and security compliance across all layers of the architecture through effective AWS resource configuration and best practices.

Project Name : EMDM

Jun 2022 — Present

Client: Citi Bank

Role: DevOps Engineer

Environment : Git,Maven, SonarQube, Nexus,Jenkins,Tomcat, Docker, Kubernetes, Prometues,Grafana.

Roles and Responsibilities:

- On the role I give support to Git/Github to the development team.
- Administration of Github like creating the branches, merging the source code from one branch to another branch and providing the specific permission to the team members.
- Merge, build and deployment of the codes to all the environments.
- Migrating the Jenkins into Docker container to reduce the server down time and improve the scalability.
- Jenkins is used as a Continuous Integration tool for automation of daily process.
- I wrote Jenkins file by using Groovy Script.
- Involved in installing Jenkins a Linux Machine.
- Creating a Master and Slave configuration to implement multiple parallel builds, like pipeline and freestyle projects.
- Administration and creation of Individual Jenkins jobs, including automatic generation, reporting and alerting of build failures.
- Used Docker Containers for running different individual services and optimizing the infrastructure cost.
- Writing Docker Files and building Docker Images, Maintaining those images into Nexus.
- Responsible for writing the Manifest and Service set files.
- Involved in the release process and Deployed applications in Kubernetes Cluster.
- Used AWS services like EC2, S3, EBS, ELB and VPC, AMI for building infrastructure.
- Creating snapshot by using volumes, and by using snapshot to create new volume and attaching the snapshot into new volume.
- Understanding the resource utilization using the Monitoring Tools like

OpenTelemetry,Loki. Performing the log analysis and identify the root cause by setting up the dashboards.

CERTIFICATES

AWS Certification from solution architect, Bengaluru

EXPERIENCE

DevOps Engineer at Clahan Technologies, Bengaluru
2021 — 2025

- Implemented and managed cloud and DevOps solutions across multiple environments to ensure efficient and reliable operations.
- Gained hands-on experience with tools such as AWS, Docker, Jenkins, Git, GitHub, SonarQube, and Kubernetes for CI/CD automation, application deployment, and monitoring.
- Assisted in configuring Jenkins pipelines to automate build, test, and deployment processes.
- Integrated SonarQube into CI/CD workflows for automated code quality analysis and continuous improvement.
- Deployed and managed applications on AWS EC2 instances, ensuring scalability and high availability.
- Collaborated with the DevOps team to optimize deployment workflows, improve scalability, and enhance infrastructure reliability.
- Contributed to the automation of operational tasks and implementation of DevOps best practices to streamline development and deployment processes.

Junior DevOps Engineer at iOPEX Technologies
Jun 2017 — Jun 2021

- **Assist in configuring, monitoring, and maintaining CI/CD pipelines using tools like Jenkins, GitHub Actions, and Docker.**
- **Support infrastructure provisioning and environment setup on cloud platforms such as AWS or Azure.**
- **Collaborate with development and operations teams to troubleshoot deployment issues and improve automation workflows.**
- **Contribute to system monitoring, log analysis, and basic scripting tasks using Linux Shell or PowerShell to enhance operational efficiency.**
